

Immunization Update

September 2010

Dear Parents and/or Guardians

The Solano County Health Department strongly recommends that your student receive an immunization booster for Pertussis (Whooping cough) due to the recent outbreaks in Solano County. The Health Department also recommends a Measles booster if your child has not yet received this. These vaccines have been proven to be safe and effective. If these immunizations were already given within the past five years, please send in your child's up-to-date shot record. If you have any questions about your child's immunization status please contact the health office. Thank you and I look forward to a healthy school year.
